ESTO NO ES UN JUGUETE**

BARRIERS

Painting Guide

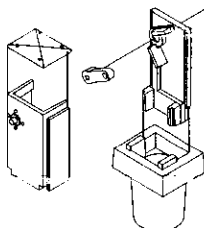

Barrier Arm - Paint segments alternating red and white, starting with red at the barrier tip.

Skirt - White

Barrier pedestal and counterweight - Grey

A
Raised version

B
Lowered version

Remove skirt detail if barriers are required to move. Provision has been made to attach a wire linkage to the crank inside the barrier pedestal which can be operated using a Peco SmartSwitch kit.

If the barrier is to be permanently closed, glue the barrier solid in the lowered position by running glue between the crank and the stop inside the barrier pedestal.

If you wish the barrier to be permanently open, use the alternative folded-up barrier moulding and glue it solid in the raised position by running glue between the crank and the lower stop inside the barrier pedestal.

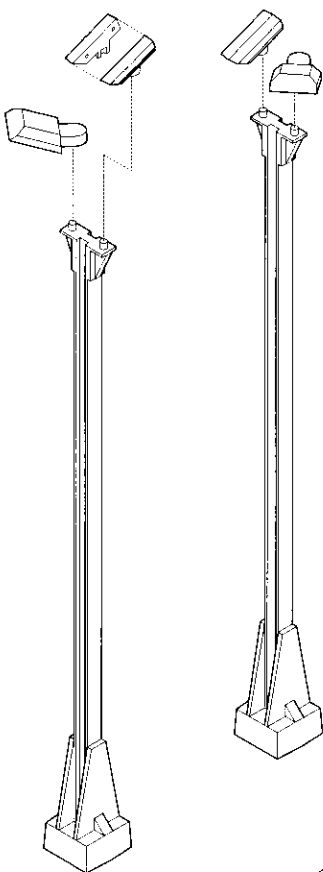

CCTV POSTS, CAMERAS & FLOODLIGHTS

Floodlights

Fix one floodlight to each post, which should be positioned close to one of the barriers so as to illuminate the required area.

CCTV Cameras

Assemble both CCTV camera heads and add one to each post. Face the cameras in a way that they will watch over the whole of the required area.

HUT
