

Potez 25 B2 polish Jupiter 'Against The Tide'

1/72

(CZ)

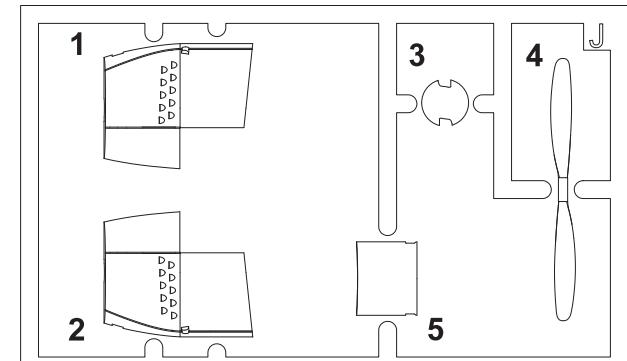

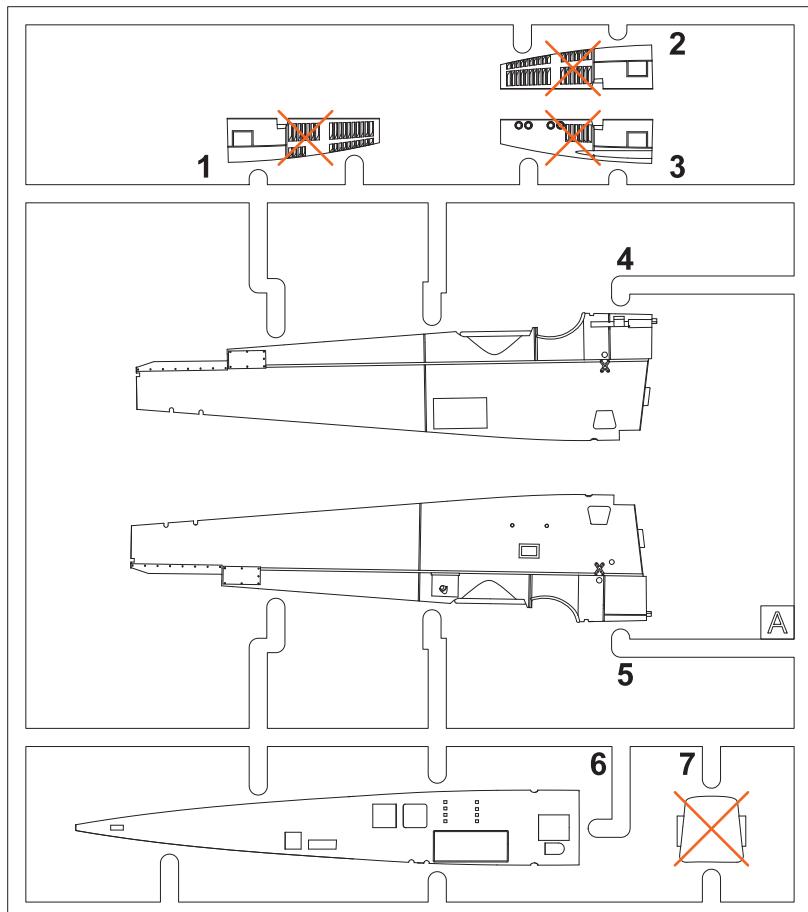

Potez 25 se stal jedním z prvních masově vyráběných letadel, které po první světové válce začaly nahrazovat letadla z válečných přebytků. Francouzské letectvo vypsalo v roce 1923 soutěž na dvoumístný typ letounu, který by byl schopen průzkumu (kategorie A2) i bombardování (kategorie B2). Vítězem soutěže se stal právě Potez 25. Zájem o tento typ byl tak veliký, že se letoun Potez 25 vyráběl od roku 1925 až do roku 1934. Vyvinut byl na základě starších typů Potez 15 a 24. Ty se nedostaly do výroby, ale přinesly některá technická řešení, použitá i u Potezu 25. Nejdůležitější bylo patrně upevnění motorového lože k trupu pomocí čtyř šroubů. To umožňovalo nejen snadné sejmoutí motoru, ale umožňovalo to snadnou montáž jakéhokoliv motoru odpovídajícího výkonu. Snad právě proto vzniklo až 87 různých verzí Potezu 25. Většina zůstala v prototypech a sériově byly vyráběny jen některé. Jinak byl Potez 25 dvojuplošník s výrazně menším spodním křídlem smíšené konstrukce. Potez 25 byl vyráběn licenčně v Polsku, Jugoslávii, Portugalsku a Rumunsku. Pro francouzské letectvo byl vyráběn s motorem Lorraine ve verzích A2/B2, s motorem Farman ve verzi Potez 25.8 pro cvičné úkoly. Hlavní výrobní verze se stala verze pro službu v koloniích, s hlubším trupem s dalšími nádržemi pro prodloužení doletu. Tato verze dostala označení Potez 25TOE a byla vyrobena ve 795 kusech. Poháněna byla také motorem Lorraine. Verze TOE sloužila hlavně v Africe, Sýrii a Indočíně. Používalo je i francouzské námořnictvo. Dočkaly se i nasazení ve druhé světové válce. Díky porážce Francie nakonec sloužily na obou stranách fronty, jak v barvách letectva Vichy, tak FAFL. V letectvu FAFL sloužily jako cvičné ještě v roce 1945. Podobně dlouho byly používány ve Francouzské Indočíně.

Rozpětí: 14,06 m, délka: 9,14 m, max. rychlosť: 210 km/h, dolet: 765 km, dostup: 6 750 m.

(EN)

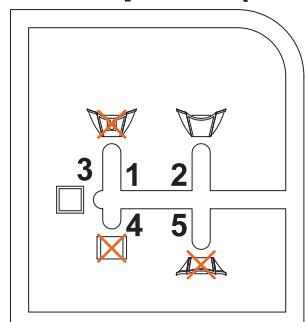

The Potez 25 was one of the new, mass produced aircraft types which in the post-WW1 era were beginning to replace war time surplus airframes. In 1923, the French military called for a two seat aircraft capable of reconnaissance (A2 role) as well as bombing missions (B2 role). The Potez 25 design became the winner of the competition and eventually the interest among operators in the type was so great that it remained in production from 1925 until 1934. The Potez 25 was based on previous designs, the Potez 15 and 24, which had not reached production but had seen the introduction of some new technical ideas within their structure later to be used in the Potez 25. Possibly the most important in the design was that the engine bearer struts were attached to the fuselage by means of just four bolts which in fact allowed not just for a very rapid removal of the power unit in case of need but also brought the possibility of coupling the airframe with almost any type of engine that provided sufficient power. This feature of the Potez 25 may very well be the true reason why so huge a number of various versions emerged, reportedly up to 87 differing by the engine used. Most of them did not reach production and remained just prototypes with just a few of them entering production and service in the end. The Potez 25 was a biplane, with its lower wing significantly smaller, the airframe was of mixed construction. It was built not just in France, but also under licence in Poland, Yugoslavia, Portugal and Romania. The French military operated the A2/B2 versions which were fitted with a Lorraine power plant and the Farman-engined Potez 25.8 version was designed for training purposes. The major production version was, however, the Potez 25TOE which had been designed for service in overseas colonies and featured a deeper belly and extra fuel tanks providing for greater range. A total of 795 was produced, fitted with a Lorraine engine. They mostly flew in Africa, Syria and French Indochina, but also saw service with the Aeronavale, or French Naval Aviation. The type remained in active service even during the Second World War, and because of the defeat of France, the type saw service with both sides of the conflict eventually, bearing colours of both the Vichy military and the FAFL. With the latter, and in French Indochina as well, the 25TOEs flew in the training role until 1945.

Wingspan: 14.06 m, length: 9.14 m, max. speed: 210 km/h, range: 765 km, ceiling: 6,750 m.
