In addition to the two sheets illustrated above, the Blick Dry Print range includes a wide assortment of letters and numbers in black, white and gold.

rub – down dry transfers

AIRCRAFT & ARMOUR MARKINGS

## ... for a professional finish

These remarkable rub-down decals can be applied over any rivet detail or panel line and give a painted on, professional look to the finished aircraft or armoured vehicle.

## DIRECTIONS

## Method A

- (1) Before removing the decals from the backing sheet carefully rub across the entire symbol to be transferred with a soft pencil or ball-point pen.
- (2) Cut decal from sheet, place in position and apply finger pressure, gently at first, making sure the decal is in the correct position, then apply firm pressure to release the decal from the carrier film.
- (3) Place backing sheet over rubbed down decal and apply further pressure to ensure that the symbol is firmly in position.

## Method B

- (1) Remove sheet of decals from backing sheet.
- (2) Cut selected decals from sheet leaving as generous a surround as possible.
- (3) Place accurately in position on aircraft or vehicle.
- (4) Rub over decal with a ball-point pen or soft pencil.
- (5) Peel off carrier film.
- (6) Place backing sheet over rubbed down decal and apply pressure to ensure that marking is firmly in position.

NOTE: If decal is damaged in application it can be removed by applying self-adhesive tape over it and peeling off. The damaged decal will adhere to the tape.

In the interest of accuracy, some symbols have been produced in two or more parts, that is, colours have been printed separately. Where this is the case, make sure that the first colour is rubbed down thoroughly before the second is applied.
